

Michigan State Police Training Academy

Training Announcement

Class III-A Training

The purpose of this two-hour training is to train law enforcement personnel in the proper use and calibration of the FC-10 and Alco-Sensor III Preliminary Breath Test (PBT) instruments. Upon completion of this training, a qualified operator will be able to administer a preliminary breath alcohol test on a suspected intoxicated subject in the state of Michigan. The operator will be familiar with the operating principles of both the FC-10 and the Alco-Sensor III, know the exterior components of the instrument, know the test procedures and sequences, and know the inspection and calibration procedures for both instruments.

Each agency is permitted two seats in the class. The training is for current Class III-A operators not trained for dry gas calibration and officers who desire to be trained as Class III-A operators.

Each officer is required to bring a PBT to the training. If the officer's agency has both the FC-10 and Alco-Sensor III models, he or she should bring one of each.

The change to dry gas for PBT calibration is mandatory with the transition to the new DataMaster DMT.

This course is MCOLES approved and officers must bring their five-digit MCOLES number with them to the training for the training to be reported to MCOLES.

Date: October 14, 2015
